PyCity Schools Student Trends

Based on the observable data for the PyCity School District there is a large difference in the percentage of students passing math (75%) and the percentage of students passing reading (86%). This difference is likely contributing to the lower number of students passing overall, which is 65%.

Both the math and reading scores remain consistent across all grades for all schools and both are passing which is defined as 70% and above for this district. It would be worth investigating the score for other classes such as history and science to get their impact on the overall passing rate.

The top 5 schools for both reading and math scores for 12th grade students are Holden, Pena, Wilson, Cabrera, and Wright. They are all charter schools with per capita spending less than $625, which is on the low end for the district. Holden and Pena are the two smallest schools with less than 1,000 students each. Wright, Carbrera, and Wilson are in the smaller half of district schools with less than 2,300 students each.
